## **Teaching**

### Teaching Philosophy

My teaching philosophy is to enthuse and capture the interest of the student. The student needs to be interested and keen to learn and a teacher who is interested and excited about teaching will capture and engage the student. I am an advocate of interactive learning to stimulate and progress learning and allow evaluation and use team work and collaboration to make learning an enjoyable experience. The use of technology and organisation is important in allowing students to prepare for teaching and expand on what they have learned. I believe in Medicine keeping all teaching relative and in context to daily practice. This is important in allowing students to realise the value of their learning.
